~~PhD~~Ph.D. GRADUATE STUDY IN COMPUTER SCIENCE

Computer Science Program
Department of Electrical Engineering and Computer Science
Howard University
Washington, DC 20059

Revised ~~February 2012~~October 2014

There is an electronic version of our printed admissions brochure, which is updated once a year. If, after reading this brochure you cannot find answers to all of your questions, or need more information, please contact us at 202-806-4822 Mondays through Fridays from 9 a.m. - 4 p.m. Eastern Standard Time, or send e-mail to jtrible.howard.edu.

For the most up-to-date admissions information please visit our Graduate School Admissions Web pages: www.gs.howard.edu

OUR PROGRAM AND THE COMMUNITY

The University and Community

Howard University is a comprehensive, research-oriented, historically black private university providing an educational experience of exceptional quality to students of high academic potential. Further, the University is dedicated to attracting and sustaining a cadre of faculty who are, through their teaching and research, committed to the development of distinguished and compassionate graduates and to the quest for solutions to human and social problems in the United States and throughout the world. This mission of the University is central to everything we do and can be found in a 1989 resolution of the Board of Trustees. With its reputation for providing high-quality education at an affordable price, Howard is consistently ranked one of the nation's very best universities. Of the approximately 10,000 students enrolled, around 4,000 are graduate and professional students.

Washington DC is the capital city of the United States of America. The city and the surrounding area offer many cultural advantages, including its well-known monuments and inspiring memorials, and an excellent array of theater and music. The metropolitan area has a population over one million.

Our Program

The Computer Science program at Howard is one of the first to be created in a historically black college and university (HBCU). The program's primary missions are to expand and diversify the pool of qualified individuals in the computing profession and to advance knowledge in computer science by providing high quality instruction and conducting research that addresses technical challenges and societal problems.

The Computer Science program will be the one of choice for students seeking high-quality undergraduate and graduate degree programs in computer science. The program will be recognized across the nation and the global community for research and education that produces diverse and versatile professionals. Graduates from our program will be able to:

- analyze, design, implement, and evaluate a computerized solution to a real life problem using appropriate tools;
- work effectively as a team member;
- enter a professional computer science position or enter an appropriate graduate program;
- communicate effectively through speaking, writing, and the use of presentation tools;
- adapt to technological changes and innovations in the discipline;
- consider the ethical and societal concerns related to computers in society and apply this knowledge in the conduct of their careers.

The program offers a traditional B.S. degree in computer science, a computer science minor option for non-engineering disciplines at Howard, a graduate certificate course in Cybersecurity, a traditional M.S. degree in computer science, an accelerated 1-year M.S. degree in computer science and a PhD in computer science. **The B.S. curriculum** is a traditional computer science

Formatted: Indent: First line: 0.5"

degree. The M.S. curriculum is oriented toward the design and application of computer systems and toward that portion of software engineering that guides and supports practice. The graduate certificate program prepares professionals in computer science and related areas to assume positions in secure systems development and managing the critical information security infrastructures in today's organizations. The M.S. program prepares highly competent and broadly skilled practitioners. A majority of the master's graduates work in industry, in companies ranging from small start-up operations to government labs and large research and development corporations. The Ph.D. program will prepare teachers and researchers for positions with universities, government research laboratories, and industry. Academic employment ranges from four-year colleges, where teaching is the primary focus, to positions at major research universities.

Currently, our faculty includes 11 tenured and tenure-track faculty and 3 adjuncts. We also have a technical and administrative support staff (3 people). Most of our graduate students are full time. Students contribute to nearly every aspect of the program's operation. In addition to taking a wide variety of courses, they have the opportunity to participate in groundbreaking research, to teach, and to attend research group meetings. The local chapter of the Association of Computing Machinery (ACM), and the Upsilon Pi Epsilon (UPE) honor society sponsors both professional and social events. Students are strongly encouraged to seek membership of these organizations, however, membership of UPE is by invitation only.

Our student population is very diverse in terms of both geographic origin and previous degrees. While computer science, information systems, and mathematics represent the largest number of undergraduate majors among our graduate students, others majored in physics and engineering.

THE FACULTY AND THEIR RESEARCH

Our Faculty

For more details: <http://www.cs.ceacs.howard.edu/faculty>

Don Coleman, Professor Emeritus; Ph.D., University of Michigan, 1971. Fault tolerant software, systems engineering, software engineering, software reliability, software metrics, simulation of parallel processes, user interfaces.

Ronald Leach, Professor Emeritus; Ph.D., University of Maryland, College Park, 1996. Software engineering, software reuse, software measurement and metrics, software fault-tolerance, software testing, operating systems.

Arthur Paul, Professor Emeritus; Ph.D., University of Virginia, 1983. Large-scale systems design, systems engineering, human-computer interaction, database systems.

John Trimble, Professor Emeritus; Ph.D., Georgia Institute of Technology, 1992. System dynamics, expert systems, software engineering, modeling and simulation, knowledge management, appropriate technology.

Formatted: Indent: First line: 0.5"

Gedare Bloom, Assistant Professor; Ph.D., George Washington University, 2013. Safety and security of cyber-physical systems, device security in the Internet of Things, embedded/real-time systems.

Legand Burge III, Professor and Chair; Ph.D., Oklahoma State University, 1998. Distributed computing, mobile computing, operating systems, middleware, data communications, applied high performance computing.

Moses Garuba, Professor Ph.D., University of London, 2000. Information security, database security, secure electronic transactions, distributed algorithms, formal methods, computer forensics.

Harry Keeling, Associate Professor and Director of Undergraduate Admissions; Ph.D., George Mason University, 1998. Intelligent tutoring systems, machine learning, artificial intelligence, intelligent agents and web-based technology, expert systems.

Peter Keiller, Associate Professor; D.Sc., George Washington University, 1996. Software engineering process, reliability engineering, software testing, software fault tolerance, statistical modeling and analysis, performance modeling.

Jiang Li, Associate Professor ~~and Director of Graduate Studies~~; Ph.D., Rensselaer Polytechnic Institute, 2003. Computer networking, network security, network simulation, data communications.

Chunmei Liu, Professor; Ph.D., University of Georgia, 2006. Bioinformatics, computational biology, algorithms, graph theory.

Wayne Patterson, Professor; Ph.D., University of Michigan, Ann Arbor, 1971. Cybersecurity, cryptology, computational science, parallel computing.

Robert Rwebangira, Assistant Professor ~~and Director of Graduate Studies~~; Ph.D. Carnegie Mellon University, 2008. Machine learning, algorithms, complexity, Forecasting and Prediction Systems, Data reduction techniques

Todd Shurn, Associate Professor; Ph.D., Southern Methodist University, 1994. Computational optimization, heterogeneous data communication networks, web services and interoperability, interdisciplinary multi-media applications.

Gloria Washington, Assistant Professor; Ph.D., George Washington University, 2011. Human-computer interaction, human-centered computing, affective computing, and biometrics.

.

Adjunct Faculty

Reginald Hobbs, Adjunct Professor Ph.D. Georgia Institute of Technology. Knowledge management, knowledge engineering, languages and semantic web, artificial intelligence

Formatted: Indent: First line: 0.5"

Guy-Alain Amoussou, Adjunct Professor, Ph.D. Universite Technologie de Compiegne, 1999. Data Mining, Knowledge Management, System Engineering, Socially Relevance Computing, Computing Education

Bernard Woolfolk, Lecturer; M.S., George Washington University, 1990. Object-Oriented development, software engineering.

Research Areas

Our faculty conducts research in a broad range of research areas. Following is a quick reference index to their interests.

Algorithms and Complexity Theory

Chunmei Liu, Wayne Patterson, Moses Garuba, Robert Rwebangira

Artificial Intelligence

Harry Keeling, Reginald Hobbs, Robert Rwebangira

Bioinformatics and Computational Biology

Chunmei Liu, Gloria Washington, Robert Rwebangira

Computer Architectures

Gedare Bloom, Legand Burge

Databases and Data Mining

Moses Garuba, Peter Keiller, Robert Rwebangira

Data Communications and Networking

Jiang Li, Legand Burge

Distributed/Parallel Computation and Operating Systems

Legand Burge, Moses Garuba

Cybersecurity

Moses Garuba, Wayne Patterson, Gedare Bloom, Gloria Washington, Jiang Li

Mobile Computing

Legand Burge, Gedare Bloom

Multimedia Systems, Gaming, and WWW Applications

Todd Shurn

Object- Oriented Computing

Legand Burge, Harry Keeling, Todd Shurn

Simulation, Animation, Visualization

Formatted: Indent: First line: 0.5"

~~OUR DEPARTMENT AND THE COMMUNITY~~

~~The University and Community~~

~~Howard University is a comprehensive, research-oriented, historically black private university providing an educational experience of exceptional quality to students of high academic potential. Further, the University is dedicated to attracting and sustaining a cadre of faculty who are, through their teaching and research, committed to the development of distinguished and compassionate graduates and to the quest for solutions to human and social problems in the United States and throughout the world. This mission of the University is central to everything we do and can be found in a 1989 resolution of the Board of Trustees. With this mission in mind the Department of Computer Science has made a conscience effort to foster a concern for human and social problems by including an emphasis on “socially relevant computing.” As a unique aspect of our PhDPh.D. program we require all students to consider and document the “social relevance” of their research efforts.~~

~~With its reputation for providing high-quality education at an affordable price, Howard is consistently ranked one of the nation’s very best universities. Of the approximately 10,000 students enrolled, around 4,000 were graduate and professional students.~~

~~Washington DC is the capital city of the United States of America. The city and the surrounding area offer many cultural advantages, including its well-known monuments and inspiring memorials, and an excellent array of theater and music. The metropolitan area has a population over one million.~~

~~Our Department~~

~~The Department of Computer Science (SCS) at Howard is one of the first to be created in a historically black college and university (HBCU). The department’s primary missions is to expand and diversify the pool of qualified individuals in the computing profession and to advance knowledge in computer science by providing high quality instruction and research that addresses technical challenges and societal problems.~~

~~The Department of SCS will be the department of choice for students seeking a high quality PhDPh.D. degree program in computer science that appreciates and fosters the student’s concerns regarding social relevance. The Department will be recognized across the nation and the global community for research and education that produces diverse and versatile professionals. Graduates from our department will be able to:~~

- ~~— analyze, design, implement, and evaluate a computerized solution to a real life problem using appropriate tools;~~
- ~~— work effectively as a team member;~~

Formatted: Indent: First line: 0.5"

- communicate effectively through speaking, writing, and the use of presentation tools;
- adapt to technological changes and innovations in the discipline;
- consider the ethical and societal concerns related to computers in society and apply this knowledge in the conduct of their careers.

The **Ph.D. program** will prepare teachers and researchers for positions with universities, industry, government research laboratories, and other institutions. Academic employment ranges from two-year and four-year colleges, where teaching is the primary focus, to positions at major research universities where the primary demand is ongoing research.

Currently, our faculty includes 11 tenured and tenure-track faculty, 2 emeritus professors, 3 adjuncts, and 1 lecturer. We also have a technical and administrative support staff (3 people). Most of our graduate students are full time. Students contribute to nearly every aspect of the department's operation. In addition to taking a wide variety of courses, they have the opportunity to participate in groundbreaking research, to teach, and to attend research group meetings. The local chapter of the Association of Computing Machinery (ACM), and the Upsilon Pi Epsilon (UPE) honor society sponsors both professional and social events. Students are strongly encouraged to seek membership of these organizations. However, membership of UPE is by invitation only.

Our student population is very diverse in terms of both geographic origin and previous degrees. While computer science, information systems, and mathematics represent the largest number of undergraduate majors among our graduate students, others majored in physics and engineering.

DEGREE PROGRAMS AND ADMISSIONS INFORMATION

Overview of Degree Programs and Requirements

The ~~program~~~~department~~ offers a Doctorate of Philosophy (Ph.D.) in a range of specializations. All students must take a minimum of 60 credit hours of course work and a minimum of 12 credit hours of dissertation. All students must be enrolled during the semester their degree is awarded, must be enrolled at Howard University a minimum of 4 semesters. At most 24 credit hours can be transferred into the program from another university. At most 6 credit hours of undergraduate course work can be applied to the program, but must be approved by the faculty advisor

Formatted: Font: 12 pt

Ph.D. Program

The Ph.D. program in the Computer Science ~~Department-program~~ provides intensive preparation in the concepts and techniques related to the design, programming, and application of computing systems. The program requires the student to declare a major and minor. The major must be selected from one of the specializations below. The minor can be a computer science specialization or from any specialization offered in any other graduate program at Howard University. The student's minor selection must be approved by their major advisor to assure synergy between the selected major and minor specializations. The Computer Science ~~Department-program~~ at Howard University offers the following computer science specializations:

Formatted: Font: 12 pt

Formatted: Font: 12 pt

Formatted: Font: 12 pt

- Software engineering,
- Cybersecurity,
- Artificial intelligence,
- Computer networks,
- Computing systems.
- Computational science.

Ph.D. Admission Requirements

1. A bachelor's degree in computer science, information systems, mathematics, or engineering from an accredited college or university.
2. At least one year of programming courses. Applicants should possess a working knowledge of at least two high-level programming languages. At least one of these languages should be C, C++ or Java;
3. A course in data structures in which the student is taught the basic data structures of linked lists, stacks, queues, and trees. The student should have extensive experience in writing programs that implement algorithms for manipulating these data structures;
4. An additional course involving machine organization. This requirement can be fulfilled by a course in operating systems, assembly language programming, computer organization, computer architecture, or similar courses;
5. At least one course in computer science having the data structures course as a prerequisite. This requirement can be fulfilled by a course in algorithms, algorithm analysis, numerical analysis, or a similar course.

Formatted: Indent: First line: 0.5"

6. One semester of operating systems;
7. One semester of an algorithms course;
8. Either one semester of probability and statistics or an equivalent course;
9. One year of calculus;
10. One semester of upper-level courses in differential equations, linear algebra, abstract algebra, or discrete mathematics. The course should have calculus as a prerequisite;
11. A cumulative grade point average of 3.0 on a 4.0 scale is required, and a cumulative grade point average of 3.0 in major course work is required.
12. Applicants should also satisfy all additional admission requirements of the graduate school.

Formatted: Indent: First line: 0.5"

Ph.D. Degree Requirements

To advance to candidacy for the ~~PhD~~Ph.D. of Computer Science degree, a student must attend the Responsible Conduct of Research Workshop, take the Expository Writing Exam, successfully pass the qualifying examination and complete the 18 credit hours core requirements listed below:

Each student must take the following core courses:

- **CSCI 570** Advanced Algorithms
- **CSCI 551** Advanced Software Engineering I
- **CSCI 510** Computer Architecture
- **CSCI 572** Computability and Complexity
- **CSCI 680** Advanced Operating Systems
- **CSCI 500** Socially Relevant Computing (2 credits)
- **CSCI 600** Research Methods (1 credit)

TOTAL OF - - 18 credits

- a) The major must consist of at least 18 credit hours of graduate work approved by the advisor.
- b) The minor must consist of at least 12 credit hours approved by the advisor

AREAS OF SPECIALIZATION

Software Engineering:

- **CSCI 552** Advanced Software Engineering II
- **CSCI 540** Object-Oriented Development
- **CSCI 683** Special Topics in Software Engineering
- **CSCI 783** Advanced Topics in Software Engineering

Cybersecurity:

- **CSCI 653** Cybersecurity I
- **CSCI 654** Cybersecurity II
- **CSCI 659** Capstone in Security
- **CSCI 684** Special Topics in Cybersecurity
- **CSCI 784** Advanced Topics in Cybersecurity
-

Artificial Intelligence:

- **CSCI 660** Artificial Intelligence
- **CSCI 651** Expert Systems
- **CSCI 673** Knowledge Engineering and Management
- **CSCI 685** Special Topics in Artificial Intelligence
- **CSCI 785** Advanced Topics in Artificial Intelligence

Formatted: Indent: First line: 0.5"

Computer Networks:

- **CSCI 548** Data Communications I
- **CSCI 549** Data Communications II
- **CSCI 550** Network Modeling and Analysis
- **ECE 487** Telecommunications
- **ECE 460** Wireless Communications
- **CSCI 686** Special Topics in Data Communications
- **CSCI 786** Advanced Topics in Computer Networks

Computing Systems:

- **CSCI 560** Performance Modeling
- **CSCI 682** Parallel Computing
- **ECE 416** Microprocessors and Microcomputers
- **ECE 420** Introduction to VLSI design

- c) **Responsible Conduct of Research Workshop Requirement.** Each student is required to take the Responsible Conduct of Research Workshop in the first semester of the graduate program. Attending and participating in this workshop is a requirement for all degrees offered by the Graduate School, including the Master of Computer Science. Details on this program, including registration, dates, and times can be found at the Graduate School's web site.
- d) **Expository Writing Requirement.** Each student is required to take the Expository Writing Examination in the first semester of the graduate program. Passing an Expository Writing Examination is a requirement for all degrees offered by the Graduate School, including the Master of Computer Science. Details on this program, including seminars for preparation to take the exam, examination dates, registration for the examination, and courses/workshops can be found at the Graduate School's web site.

Formatted: Indent: First line: 0.5"

Important Notes:

- A minimum of 9 credit hours of courses must be taken outside of Computer Science. These course must be approved by the student's graduate committee
- The minor must be approved by the Computer Science major specialization advisor. It must be a minimum of 12 credit hours.
- Students must pass a comprehensive Exam within the first three years in the program to advance to candidacy. The exam will consist of ~~two five two-hour~~ tests, with ~~each~~ test covering ~~two one~~ of the five core areas, ~~and the second test covering three of the five core areas. A test will contain two questions from each core area.~~ For each core area that is tested, a student must score a minimum of 85% to obtain a high pass and a minimum of 70% to obtain a low pass. A high pass is required in at least four of the core areas on the comprehensive exam. The exam will be offered once at the beginning of the Fall/Spring semesters. There is a limit of two times a student can take the exams. If a student gets an A grade in a core course he/she can petition to the ~~department~~ Computer Science program to place out of taking the comprehensive examination in that core area and if granted is automatically awarded a high pass in that core area. If a student is unable to pass the comprehensive exams after two tries for extraordinary reasons, he/she can appeal to the graduate program committee for the third try by submitting a written letter and necessary support documentation. The committee decides whether or not to approve the appeal. A student can appeal only once.
- ~~The student must select a~~ graduate ~~studies~~ advisor that covers the selected major specialization. With the assistance of the graduate advisor the student can make recommendations for the remaining members of their graduate committee. At least one member must be outside of the university (external reviewer). At least one member must be in the minor area. Under normal circumstance there are 5 members of the committee. The majority of the committee must be from the ~~Systems~~ Department of Electrical Engineering and ~~C~~omputer ~~S~~cience ~~department~~.

Computer Science Ph.D. Student Handbook

Formatted: Centered

Formatted: English (United States)

- The student's proposal must be approved by the advisor before it is presented and defended to the whole committee. The proposal defense is open to the whole department.
- The whole [thesis](#) committee (excluding the external reviewer) must approve the proposal before the student is approved to move forward with the dissertation. The proposal defense includes the student's defending the 'social relevance' of the proposed effort. [The detailed procedure of approaching Ph.D. candidacy is elaborated in the following section.](#)
- The student must in minimum publish two conference articles and have one journal article accepted (with no or minor revision) in the thesis area in order to earn the degree. The quality of articles should be justifiable with objective metrics such as the impact factor of journals, the acceptance ratio of conferences and the citation number of a single article. A general guideline is for a journal to have an impact factor (as defined by Journal Citation Report) of no less than 0.9 or an H-index (as used by Google Scholar) of no less than 10 or an SCImago Journal Rank indicator of no less than 355, for a conference to have an acceptance rate of no more than 30%, and for an article to be cited for no less than 5 times (excluding self-citation). If the adopted metrics or metric values are arguable, they must be approved by the Graduate Program Committee.
- The thesis completed by the student must constituent significant innovation in the discipline of computer science, albeit the innovation may be applied to other disciplines. The definition of computer science quoted from Wikipedia is provided below.

Formatted: Indent: Before: 0.5", No bullets or numbering

Formatted: List Paragraph, Left, No bullets or numbering

Formatted: List Paragraph, Left, No bullets or numbering

Formatted: List Paragraph, Left, Indent: Before: 0.75", No bullets or numbering

"Computer science is the scientific and practical approach to computation and its applications. It is the systematic study of the feasibility, structure, expression, and mechanization of the methodical procedures (or algorithms) that underlie the acquisition, representation, processing, storage, communication of, and access to information, whether such information is encoded as bits in a computer memory or transcribed in genes and protein structures in a biological cell."

Formatted: Indent: Before: 0.5", Tab stops: Not at 0.75"

To help understanding, an approximate single-sentence summary of the definition is that Computer Science is the study of information handling using computers.

The areas of Computer Science, also quoted from Wikipedia, include

- Theoretical computer science
 - ✓ Theory of computation
 - ✓ Information and coding theory
 - ✓ Algorithms and data structures
 - ✓ Programming language theory
 - ✓ Formal methods
- Applied computer science
 - ✓ Artificial intelligence
 - ✓ Computer architecture and engineering

Should arguments be raised, the Graduate Program Committee has the right of the final judgments.

- Upon completion of the dissertation the student must defend their effort in a session open to the university. The dissertation must be approved by the whole committee in order to fulfill the dissertation requirement toward the [PhD Ph.D.](#)

Ph.D. Candidacy Procedure

The following flow chart describes the procedure.

Remarks:

Computer Science Ph.D. Student Handbook

Formatted: Centered

Formatted: English (United States)

1. 5 journal and 10 conference articles are the minimum. There is no upper limit of the number of articles. There is also no source restriction beyond the 5 journal and 10 conference articles.
2. Articles that meet the one of the following conditions are considered of high quality.
 - In journals of impact factors (as defined by Journal Citation Report) ≥ 0.9 , or
 - In journals of an H-index (as used by Google Scholar) of no less than 10, or
 - In journals of an SCImago Journal Rank indicator of no less than 355, or
 - In conferences of acceptance rate $\leq 30\%$, or
 - With ≥ 5 citations.
3. A written proposal includes the following content.
 - Preliminary literature review
 - Preliminary approach
 - Preliminary results (optional)

A written proposal has the following format.

- 10 pages minimum including bibliography
- 11-pt fonts
- Single line spacing

Formatted: Indent: Before: 0.5"

Plan of Study

In collaboration with their individual advisor, all Ph.D. students must complete the deliberation of their study plan and submit it to the director of graduate studies by the beginning of the third semester being in the program. The plan shows how a student should progress through the program toward the degree, such as when to take which courses, when to take the comprehensive exams, when to apply for candidacy and so on. The plan of study should be signed by the advisor of the student before submission, and be approved by the director of graduate studies.

Once submitted and approved, the student should follow the plan unless catastrophic situation occurs. Minor revisions are allowed and should be approved by both the advisor and the director of graduate studies. Major revisions may result in disruption of the study and are strongly discouraged.

Graduate Courses

CSCI-510	Computer Architecture	3 Credits
<p>This course aims to build on a prior knowledge of computer organization by exploring more advanced concepts related to the design of computer systems and components. Topics include processor design, instruction set design, and addressing; control structures and microprogramming; memory management, caches, and memory hierarchies; and interrupts and I/O structures.</p>		
CSCI-570	Advanced Algorithms	3 Credits
<p>This is a theoretical and advanced course in algorithms; it will present useful techniques for solving challenging programming problems, using efficient algorithms and data structures. It will also provide advanced techniques in the analysis of algorithms and the fine-tuning of algorithms to particular systems to improve performance.</p>		
CSCI-551	Advanced Software Engineering I	3 Credits
<p>This course aims to develop the broad understanding of the discipline of software engineering (gained in the earlier Software Engineering course) by considering the wider systems engineering context in which software plays a role. It aims to examine the concepts and techniques associated with a number of advanced and industrially relevant topics, relating to both the product and processes of software engineering.</p>		

Formatted: Indent: First line: 0.5"

Formatted: Centered

Formatted: English (United States)

CSCI-520	Computability and Complexity	3 Credits
<p>This course explores the relationship between problems, algorithms, and languages. Computability: finite automata, rewriting systems, Turing machines (linear speedup, robustness, and the Universal Turing machine). It presents recursive and recursively enumerable languages, the Church-Turing thesis, and complexity classes defined in terms of time, space, and circuits.</p>		
CSCI-680	Advanced Operating Systems	3 Credits
<p>This course presents an exciting range of materials from the broad field of operating systems, including basic operating system structure, file systems and storage servers, memory management techniques, process scheduling and resource management, threads, distributed systems, security and a few other advanced topics. It will also examine influential historical systems, important current efforts, extracting lessons both on how to build systems as well as how to evaluate them.</p>		
CSCI-632	Advanced Database Systems	3 Credits
<p>This course presents advanced database system design and implementation. It will start with the basic relational databases and then cover advanced topics in modern database systems, including object-oriented databases, XML databases, distributed databases, and on-line analytical processing. It will also present various data description and query languages, database design, and query processing and optimization, and also look at distributed object model, and data mining and data warehouses.</p>		
CSCI-634	Computer Simulation and Modeling	3 Credits
<p>This course will provide students with the ability to model, simulate and analyze complex systems in a reasonable time. This course is divided into three parts and covers advanced techniques in simulation model design, model execution and model analysis. A selection of model design techniques such as conceptual models, declarative models, functional models, constraint models, and multi-models will be introduced.</p>		
CSCI-548	Data Communications I	3 Credits
<p>Includes data communications media, the ISO network model, network systems elements, local and large scale networks, and line protocols. Students will monitor performance of local area networks using appropriate hardware and will simulate some of the problems of network noise, excess traffic, performance of bridges and gateways, etc. in software. Requires the completion of a group or individual project involving the design, development and demonstration of a communication system and its protocols.</p>		
CSCI-549	Data Communications II	3 Credits
<p>This course is a continuation of Data Communications I. It introduces further networking topics by discussing wireless networking, and the components of network management – fault management, performance, configuration, security and accounting.</p>		

Formatted: Indent: First line: 0.5"

Formatted: Centered

Formatted: English (United States)

CSCI-549	Computational Biology	3 Credits
Introduces computational methods for understanding biological systems at the molecular level. Problem areas such as mapping and sequencing, sequence analysis, structure prediction, phylogenetic inference, regulatory analysis. Techniques such as dynamic programming, Markov models, expectation-maximization, local search.		
CSCI-575	Intro. To Machine Learning	3 Credits
Techniques for learning from data and applying these algorithms to application settings. Topics covered include Bayesian methods, linear classifiers such as the perceptron, regression, and non-parametric methods such as k-nearest neighbors.		
CSCI-653	Cybersecurity I	3 Credits
This course will provide an intensive overview of the field of cryptography, providing a historical perspective on early systems, building to the number theoretic foundations of modern day cryptosystems. Students will study how cryptosystems are designed, to match cryptosystems to the needs of an application, and basic cryptanalysis. Real life breaches of common cryptosystems will be presented to better convey the dangers that lurk in cryptosystem design and in the design of systems that rely on cryptography.		
CSCI-654	Cybersecurity II	3 Credits
This course is a continuation of Computer Security I. It will present security policies, models, and mechanisms for secrecy, integrity, and availability. Topics include operating system models and mechanisms for mandatory and discretionary controls; data models, concepts, and mechanisms for database security; basic cryptography and its applications; security in computer networks and distributed systems; and control and prevention of viruses and other rogue programs.		
CSCI-552	Advanced Software Engineering II	3 Credits
This course is a continuation of the course CSCI-551 (Software Engineering I). The emphasis of the course is on software engineering. Topics covered include verification, metrics, software fault tolerance, maintainability and reliability. Extensive use of the formal properties of algorithms is made. Prerequisite: CSCI-551 (Software Engineering I).		
CSCI-650	Artificial Intelligence	3 Credits
This course presents an overview of artificial intelligence and a survey of the major areas of the field. Course objectives are to study the various knowledge representation methods and techniques in solving AI problems in the literature, gain a level of proficiency in LISP that will enable the student to program an AI problem; design a solution to an AI problem using LISP or a specialized AI language.		
CSCI-651	Expert Systems	3 Credits
This course presents an overview of expert systems and a survey of the major areas of the field. Course objectives are to study the various knowledge representation methods and techniques in solving expert systems problems in the literature, in order to design and implement solutions to problems in specific application domain. Prerequisite: CSCI 650, Artificial Intelligence.		

Formatted: Indent: First line: 0.5"

Formatted: Centered

Formatted: English (United States)

CSCI-532	Advanced Operations Research	3 Credits
<p>This course will acquaint students with the formulation, solution, and implementation of operations research models for analyzing complex systems in industry or government, also familiarizing students with special techniques of the field such as linear programming and network analysis. Topics include Simplex Method, Duality Theory, and Network Analysis.</p>		
CSCI-540	Object-Oriented Development	3 Credits
<p>This course will provide a fundamental understanding of the object-oriented paradigm, and how it is used in analysis, requirement specification, design, and programming. Emphasis is on object-oriented design. Covers different specification techniques with a focus on the unified modeling language. Object-oriented databases, object-oriented user interfaces and object-oriented business processes, as well as standards in object orientation will be introduced.</p>		
CSCI-550	Network Modeling and Analysis	3 Credits
<p>This course presents various topics related to the design, modeling, and analysis of telecommunication networks, including queuing models, loss systems, overflow systems, simulations, and routing strategies. Emphasis will be placed on exact and approximate methods for measuring the performance of such networks. Upon completion of this course, students will be able to apply modeling techniques to telecommunication networks, based on specific characteristics, and measure the performance of each using both exact and approximate methods.</p>		
CSCI-682	Parallel Computing	3 Credits
<p>This course aims at exploring several alternative programming models and contrasting their suitability for different architectures and applications. The material covered will encompass topics in parallel computer architectures, parallel programming models, and languages. Appropriate examples for existing or proposed parallel architectures will be surveyed. Alongside, students will have the opportunity to gain hands-on experience with MPI and PVM.</p>		
CSCI-685	Special Topics in Software Engineering	
<p>This course will present special research projects in software engineering for students who wish to independently pursue reading and study in a topic mutually agreed upon by a member of the faculty and the student. Prerequisite: permission of the director of the Computer Science program.</p>		
CSCI-686	Special Topics in Cybersecurity	
<p>This course will present special research projects in information security for students who wish to independently pursue reading and study in a topic mutually agreed upon by a member of the faculty and the student. Prerequisite: permission of the director of the Computer Science program.</p>		
CSCI-685	Special Topics in Artificial Intelligence	
<p>This course will present special research projects in Artificial Intelligence for students who wish to independently pursue reading and study in a topic mutually agreed upon by a member of the faculty and the student. Prerequisite: permission of the director of the Computer Science program.</p>		

Formatted: Indent: First line: 0.5"

Formatted: Centered

Formatted: English (United States)

CSCI 686	Special Topics in Data Communications	
<p>This course will present special research projects in Data Communications for students who wish to independently pursue reading and study in a topic mutually agreed upon by a member of the faculty and the student. Prerequisite: permission of the director of the Computer Science program.</p>		
CSCI 687	Special Topics in Computer Systems	3 Credits
<p>This course will present special research projects for students who wish to independently pursue reading and study in a topic mutually agreed upon by a member of the faculty and the student. Prerequisite: permission of the director of the Computer Science program.</p>		
CSCI-659	Capstone in Security	3 Credits
<p>This course is the terminal project for the Information Security Certificate program. It requires the design, implementation, setup and configuration of realistic enterprise computing applications and environments. Securing the infrastructure and integration of different services and technology in efficient, secured and redundant manners, and utilizing open-source and commercial security products.</p>		
CSCI 673	Knowledge Engineering and Management	3 Credits
<p>Knowledge Engineering is the process of building and maintaining Knowledge structures, particularly intelligent problem-solving systems. Knowledge management is concerned with collecting and making accessible the knowledge structures most relevant to a particular set of stakeholders. This course covers selected methods from different areas of Knowledge Engineering and knowledge management. Topics include knowledge representation and reasoning, knowledge acquisition, knowledge synthesis and knowledge evolution.</p>		
CSCI-599	Master's Project	3 Credits
<p>This is the terminal work for the non-thesis option of the master's degree program. It affords the opportunity to conduct applied research, design, implement, setup and configure a realistic enterprise computing application and its environment. Candidates who select the Master's Project must choose a major professor to direct their project. The advisor and the student may identify other resource persons to serve in an advisory capacity for the project. Before beginning the project, student must present a project concept proposal to the major professor. The Director of Graduate Studies must approve this project. Student will write a project report and present the study at an announced open forum similar to the thesis defense. This report will not be on file in the Howard University library.</p>		
CSCI-699	Master's Thesis	3 Credits
<p>The thesis option provides the student the opportunity to conduct original research and to report this in a scholarly manuscript. This option is especially well suited to a student who plans on pursuing a PhD degree. Students who select this option must choose a major professor to act as the chair of their thesis committee and two additional committee members. Before beginning work on a thesis, a student must present a proposal to their committee for approval. The committee will direct and supervise the work carried out by the student. The student is bound by the Graduate School rules and regulations for thesis defense.</p>		

CSCI-510	Computer Architecture	3 Credits
-----------------	------------------------------	------------------

Formatted: Indent: First line: 0.5"

Formatted: Centered

Formatted: English (United States)

This course aims to build on a prior knowledge of computer organization by exploring more advanced concepts related to the design of computer systems and components. This course will present special research projects in software engineering for students who wish to independently pursue reading and study in a topic mutually agreed upon by a member of the faculty and the student. Prerequisite: permission of the Chair of the Department		
SYCS-684	Special Topics in Cybersecurity	3-Credits
This course will present special research projects in cybersecurity for students who wish to independently pursue reading and study in a topic mutually agreed upon by a member of the faculty and the student. Prerequisite: permission of the Chair of the Department		
SYCS-685	Special Topics in Artificial Intelligence	3-Credits
This course will present special research projects in Artificial Intelligence for students who wish to independently pursue reading and study in a topic mutually agreed upon by a member of the faculty and the student. Prerequisite: permission of the Chair of the Department of Systems and Computer Science.		
SYCS-686	Special Topics in Data Communications	3-Credits
This course will present special research projects in Data Communications for students who wish to independently pursue reading and study in a topic mutually agreed upon by a member of the faculty and the student. Prerequisite: permission of the Chair of the Department		
SYCS-687	Special Topics in Computing Systems	3-Credits
This course will present special research projects in computing system for students who wish to independently pursue reading and study in a topic mutually agreed upon by a member of the faculty and the student. Prerequisite: permission of the Chair of the Department		
SYCS-688	Special Topics in Computational Systems	3-Credits
This course will present special research projects in computational systems for students who wish to independently pursue reading and study in a topic mutually agreed upon by a member of the faculty and the student. Prerequisite: permission of the Chair of the Department of Systems and Computer Science.		
SYCS-500	Socially Relevant Computing	2-Credits
This course will present examples of socially relevant computing across the various areas of specialization in computing. Students will be challenged to identify the social relevance of their particular interests		
SYCS-600	Research Methods	1-Credit
This course will cover research methodology. Attention will be given to structuring a well-formulated research topic, construction of research hypothesis, testing hypothesis, experimental investigation, conducting literature reviews, and ethics in scientific investigation and research presentation		
SYCS-783-8	Advanced Topics in select specialization	variable Credits
This course will cover advanced research topics in one of the given specializations and should result in a reviewed paper or conference presentation. Prerequisite: completion of special topic course in the given specialization or permission of the Chair of the Department of Systems and Computer Science.

Formatted: Centered

Formatted: English (United States)

SYCS 799	PhD Dissertation	variable Credits
<p>The thesis option provides the student the opportunity to conduct original research and to report this in a scholarly manuscript. This option is especially well suited to a student who plans on pursuing a PhD degree. Students who select this option must choose a major professor to act as the chair of their thesis committee and two additional committee members. Before beginning work on a thesis, a student must present a proposal to their committee for approval. The committee will direct and supervise the work carried out by the student. The student is bound by the Graduate School rules and regulations for thesis defense.</p>

Financial Support in the Program

Financial support in the Computer Science program is available in three forms:

- 1. University Graduate Assistantships.** These positions carry a remission of tuition and the requirement that the student work 20 hours a week as a Teaching Assistant under the direction of the program, usually in support of program classes in beginning programming courses. These are often awarded very early in the application cycle. As a matter of policy, all entering graduate students are considered for such funding unless they state otherwise. A letter of interest addressed to the program director, resume, and transcript are all that is required for consideration. Selection criteria include: undergraduate major, GPA, relevant work experience and communications skills.
- 2. Research Assistantships.** These are funded by faculty research grants, which are almost always based on funds the faculty member has obtained to support his or her area of research. These are often awarded at different times in the application cycle, since grants are awarded at different times. The funds also expire at different times during the academic year, depending on the particular grant or contract. As a matter of policy, all entering graduate students are considered for such funding unless they state otherwise. A letter of interest addressed to the program director, resume, and transcript are all that is required for consideration. Selection criteria include: undergraduate major, GPA, relevant work experience and communications skills.
- 3. Graduate School funded support.** These funds are almost always handled entirely by the Graduate School. For more information on these funds, visit the graduate school website at www.gs.howard.edu.

Honor Code Policy for Programming Projects

Unless otherwise stated, at the time that an assignment or project is given, all work handed in for credit is to be the result of individual effort. (In some classes group work is encouraged; if so, that will be made explicit when the assignment is given.)

I. You (or your group, if a group assignment) may:

- seek assistance in learning to use the computing facilities;
- seek assistance in learning to use special features of a programming language's implementation;
- seek assistance in determining the syntactic correctness of a particular programming language statement or construct;
- seek an explanation of a particular syntactic error;
- seek explanations of compilation or run-time error messages

II. You (or your group, if a group assignment) may not seek assistance from anyone else, other than your instructor or teaching assistant:

- in designing the data structures used in your solution to a problem;
- in designing the algorithm to solve a problem;
- in modifying the design of an algorithm determined to be faulty;
- in implementing your algorithm in a programming language;
- in correcting a faulty implementation of your algorithm

- in determining the semantic correctness of your algorithm.

III. Unless permission to do so is granted by the instructor, you (or your group, if a group assignment) may not:

- give a copy of your work in any form to another student;
- receive a copy of someone else's work in any form;
- attempt to gain access to any files other than your own or those authorized by the instructor or computer center;
- inspect or retain in your possession another student's work, whether it was given to you by another student, it was found after other student has discarded his/her work, or it accidentally came into your possession;
- in any way collaborate with someone else in the design or implementation or logical revision of an algorithm;
- present as your own, any algorithmic procedure which is not of your own or of the instructor's design, or which is not part of the course's required reading (if you modify any procedure which is presented in the course's texts but which is not specifically mentioned in class or covered in reading assignments, then a citation with page number must be given);
- incorporate code written by others (such as can be found on the Internet);

IV. You must:

- report any violations of II and III that you become aware of;
- if part of a group assignment, be an equal "partner" in your group's activities and productions, and represent accurately the level of your participation in your group's activities and productions.

ADMISSIONS INFORMATION

The University promotes academic excellence through a highly selective admission process. Students who are admitted show strong personal motivation along with backgrounds of consistent academic growth and achievement. The University also attracts and seeks out socially and economically deprived students who show promise of gaining from a Howard University education.

To protect its character and standards of scholarship, the University reserves the right, and the applicant concedes to the University the right, to deny admission to any student at any time for any reason the University deems sufficient.

Note to Prospective Students

On September 24, 1983, the Board of Trustees of Howard University adopted the following policy statement regarding applicants for admission: "Applicants seeking admission to Howard University are required to submit accurate and complete credentials and accurate and complete information requested by the University. Applicants who fail to do so shall be denied admission. Enrolled students, who as applicants failed to submit accurate and complete credentials or accurate and complete information on their application for admission shall be subject to dismissal when the same is made known regardless of classification."

Any applicant with an acceptable academic record and an undergraduate degree from a regionally accredited institution or any international student with equivalent qualifications is eligible to apply for admission to the Graduate School. Applicants are expected to have received adequate training in the fields in which graduate work is planned. The department in which the

student plans to study shall determine whether or not the student's training is adequate. If a student is qualified to be admitted for graduate study in a particular graduate department, a recommendation for admission is made to the Graduate School by the program. Special admission criteria for the individual departments are included in the descriptions of the programs offered through the Graduate School.

A cumulative grade point average of 3.0 on a 4.0 scale is required, and a cumulative grade point average of 3.0 in major course work is required.

General Admission Requirements

- On-line application and signature page or
- Downloadable paper application (HTML) | (Acrobat). Please refer to the code sheet.
- The non-refundable \$45 application fee (check or money order ONLY)
- Official transcripts must be submitted directly from the Registrar's Office from ALL colleges and universities attended (exceptions require the approval of the Dean)
- GRE Scores (Only official score reports are accepted within 5 years of the test date) www.gre.org GRE scores sent directly from ETS (HU code: 5297)
- Statement of Academic and Research Interest
- Autobiographical Sketch (Personal biography)
- Resume
- Three letters of recommendation sent directly to the Office of Graduate Recruitment and Admissions in a sealed envelope Word (MUST BE IN SEALED ENVELOPES)

International Applicants Admission Requirements

In addition to the requirements listed above you must submit the following:

- Official transcripts, final certificates and/or mark/grade sheets must be sent directly from the college or university to the Office of Graduate Recruitment and Admissions, and must show proof of degree(s) earned, courses taken and marks/grades received. In situations where the university will not send transcripts directly official transcripts, received indirectly, can be approved by the Dean's Office. Also, ALL transcripts must be evaluated by World Education Services (www.wes.org) or AACRAO (www.aacrao.org) and be forwarded to Graduate Recruitment and Admissions.
- If the transcripts are not in English, they must be accompanied by an official translated copy.
- All documents must bear the same name that appears on the admissions application unless an official document so submitted indicating a change of name.
- TOEFL Scores (Minimum computer-based score of 213 is required and only official score reports are accepted within 2 years of the test date) www.toelf.org. TOEFL scores must be sent directly from ETS (HU code: 5297).
- The TOEFL test is not required if you received a degree in the U.S.
- Statement of Financial Resources – A completed form that verifies proof of financial support (sufficient funds to cover expenses for one full year – as indicated on the graduate school website) and supporting financial documentation indicating sources of funds while attending Howard University (such as a certified bank statement dated within three months of registration).
- Verification of six months history with bank.

For information on how to apply and where to send materials for other graduate and professional programs at Howard University, visit the Graduate School webpage - www.gs.howard.edu

Caution to Prospective Students

The Board of Trustees of Howard University on September 24, 1983, adopted the following policy statement regarding applications for admission: "Applicants seeking admission to Howard University are required to submit accurate and complete credentials and accurate and complete information requested by the University. Applicants who fail to do so shall be denied admission. Enrolled students who as applicants failed to submit accurate and complete credentials or accurate and complete information on their application for admission shall be subject to dismissal when the same is made known, regardless of classification."

Application Deadlines

- **Fall Semester:** February 15th**
- **Spring Semester:** October 1st
- **Summer Semester:** March 15th

All credentials must be sent to:

Howard University Graduate School,
Office of Graduate Recruitment and Admissions
4th and College Streets, N.W., Washington, D.C. 20059

Financial Support Programs:

Merit-based financial support for Graduate Students is available through graduate research and teaching assistantships, fellowships, and tuition scholarships. Each category of support is awarded annually on a competitive basis. Award recipients are expected to perform specific duties for 15 hours per week during the academic year. The responsibilities, often described as an internship, are defined and evaluated by the academic department or the Graduate School depending upon the appointment. The selection / appointment process, eligibility criteria and award package for graduate assistantships, fellowships and tuition scholarships are described below:

Selection and Appointment:

The selection process for each category of financial support is aggressively pursued between February and June for the subsequent academic year. New and continuing graduate students are encouraged to apply early for these awards with the academic chair or director of graduate studies. Additionally, students may apply for financial support administered through the Graduate School. The appointment for graduate assistants and fellows begins on August 15th and ends on May 15th of each academic year. Please note if a funding offer is not presented in writing by June 15 from the academic department or the Graduate School, the likelihood of obtaining one of these awards is greatly diminished. After June 15th, new and continuing students are encouraged to seek external or need-based financial support for the upcoming academic year.

Eligibility:

The minimum GPA requirement is 3.0 for new and 3.2 for continuing students. However, because these awards are merit-based and reviewed competitively, the definition of quality academic performance may vary. Award recipients must enroll for the fall and spring as full-time students

Computer Science Ph.D. Student Handbook

Formatted: Centered

Formatted: English (United States)

defined by a minimum of 9 credit hours. Additionally, students are required to pay their own student fees each semester. (Click here for Eligibility details)

Award Package:

The award package for graduate research / teaching assistantships and fellowships includes a 10-month tuition waiver and a minimum stipend (12,000 for master's students and 13,000 for Ph.D. students). In many cases, additional stipend support is available through funded grants. Students may inquire about these opportunities at the time of application submission.

Formatted: Indent: First line: 0.5"

Stipend Disbursement:

Graduate research / teaching assistants and fellows should prepare to receive their stipend disbursement the first payroll date in September. The last disbursement occurs the final pay cycle in May. Please note new international graduate students typically receive the first stipend disbursement during the last pay cycle in September due to the process of obtaining a social security number. However, the first stipend amount will be greater to reflect the appointment date.

The Financial Aid Office is located in the Johnson Administration Building (Main Campus) Room 205, 2400 Sixth Street, N.W., Washington, DC 20059. Hours of operation are 8:30 a.m. - 3:00 p.m. Monday, Tuesday, Thursday and Friday. The office is open from 8:30 – 5:00 on Wednesdays.

Applications for financial support administered by the Graduate School should be mailed to:

Office of Retention, Mentoring and Support Programs
Howard University Graduate School
4th and College Streets, NW, Washington, DC 20059
ATTN: Fellowship Committee

GETTING REGISTERED

It is extremely important that you see your academic advisor prior to registering to ensure that you select the appropriate courses, complete a Request for Registration form, and get a personal identification number (PIN). Our current registration system is designed to prohibit students from registering for classes for which they have not completed the required pre- or co-requisite courses. Therefore, if you encounter a "registration error," this means that the system does not recognize you as having met the prerequisite(s) for the selected course. You must make another selection, or meet with your advisor for a course prerequisite override. If your advisor feels that you have met the prerequisite(s) for a particular course, he/she will approve your course selection.

1. Read over these instructions, or print them out. Once you are finished, go to the bottom of this page and click "Proceed to Bison Web Registration and Students Service".
2. Click LOG IN TO SECURE AREA on the Bison Web homepage.
3. Enter the "@" sign followed by your student identification number. Then enter your PIN. Your PIN must be six (6) numerical digits. Click the "LOGIN" button.

For information on your PIN number, please use one of the following resources:

- o Student Reference Manual (page 11)
 - o Your advisor
 - o Enrollment Management (202-806-2705)
 - o Courtesy desk in the Blackburn Center Ballroom
4. Type in your PIN again on the Login Verification Page, and click the LOGIN button.
 5. If this is the first time you have signed on, a TERMS OF USAGE PAGE will display. Please read and if you accept the terms, click the CONTINUE button. If you do not accept the terms, click the EXIT button.
 6. Select the phrase Student Services and Financial Aid.
 7. Select the phrase Registration.

Formatted: Centered

Formatted: English (United States)

8. When the REGISTRATION page displays, click on SELECT TERM.
9. When the SELECT TERM page displays, click on the arrow at the right of the word TERM and select the appropriate term.
10. Click on the SUBMIT TERM button. The system will return you to the REGISTRATION page.
11. Click on CHECK YOUR REGISTRATION STATUS to assure you are able to register. If there are no holds which prevent registration click on the MENU at the top right of the page. If you are not able to register click the exit button at the top of the page.
12. When the registration page displays click on LOOK UP CLASSES TO ADD and follow the instructions.
13. When the classes are displayed, select the courses you want by clicking the boxes on the left side of the courses. When all courses are selected, click the REGISTER button. If there are no errors, you are now registered. If there are errors, you must restart from step 11.

This completes the registration process. Please verify your course selections by printing your schedule and making sure that the appropriate grade mode has been selected. If you need further assistance, call 806-2705.
